DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed July 2, 2010 is fully considered. Claims 11 and 18-30 are cancelled.

Election/Restrictions

2. Claim 1 is allowable. The restriction requirement between species, as set forth in the Office action mailed on June 9, 2009, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 2, 3, 5, 6 and 15, directed to a retrieval catheter drawn to a distal balloon and aspiration mechanism are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

3. Claims 1-10 and 12-17 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Applicant has amended independent claim one to include the subject matter of claim 30, previously indicated as allowable, wherein the distender includes "a distal end annulus and a proximal end annulus separated by a radially outward-facing circumferential wall, wherein a portion of the circumferential wall is radially inside the frusto-conical annular element and co-axial with the annular distender ring". Applicant's invention is drawn to a novel retrieval apparatus wherein an annular distender ring and adjacent frusto-conical annular element are positioned on the distal end of a tube, the tube itself being extended by a hypotube that mates with the frusto-conical annular element. This distender ring/frusto-conical annular element serves to prevent a latching effect by the distal tip of a catheter wall that is tapered to a snug fit on the guidewire of the filter to be retrieved, as the distender ring extends past the distal end of the tapered tip to create an opening to withdraw the filter. The invention reads of the prior art references (Vale et al. (US 2002/0058963 A1) and Dorn et al. (US 2002/0183826 A1)) which fail to disclose a distal end annulus and a proximal end annulus separated by a radially outward-facing circumferential wall, wherein a portion of the circumferential wall is radially inside the frusto-conical annular element and co-axial with the annular distender ring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
